*and*  
**Audio Engineering Society**  
Washington DC Section

*are jointly hosting*

## **An Evening of Acoustics Demos**

**Thursday, 6 August 2009**

*6:30pm — Sign-in and social (complimentary food and beverages)*

*7:00pm — Demos by Paul Arveson and by Steve Garrett,  
plus a demo clip from an ASA acoustics demo DVD.*

*Discussion among all attendees toward developing structured acoustics  
and audio demos for college and high school presentations.*

The US education system is in a state of crisis, where many schools don't even teach basic physics. And yet, today's iPod generation is uniquely positioned to relate to the science and its practical applications behind sound and music.

It is up to grassroots volunteers to expose these students to acoustics and audio as fun introductions to science.

The objective of this workshop is to share ideas on available resources and how to conduct exciting acoustics and audio demonstrations to college and high-school students.

Everyone interested in helping develop such a program, or in conducting acoustics/audio demos at neighborhood schools and colleges is invited to attend.

This meeting will be held at:

**American Center for Physics  
Conference Room A  
One Physics Ellipse  
College Park, MD 20740**
